

JOAO PEDRO SPERANDIO

Backend Developer | PHP • Laravel • REST APIs • MySQL

Regente Feijo - SP, Brazil • (18) 99672-3278 • jpbentosperandio@gmail.com • github.com/ooaoJ

PROFESSIONAL SUMMARY

Backend-focused developer building web applications with PHP and Laravel. Hands-on experience with REST APIs, data modeling, external service integrations, and Python automation. Currently working as an administrative intern at the Municipality of Anhumas, applying programming to automate processes and develop internal solutions. Problem-solving oriented, organized, and focused on code quality, with technical training from SENAI and intensive preparation for Sao Paulo Skills.

TECHNICAL SKILLS

Backend PHP • Laravel • MVC	APIs & Integrations REST • JSON • Webhooks	Database MySQL • Relational modeling	Frontend JavaScript • Vue.js • Bootstrap
Automation Python • Playwright • Regex	Tools Git • GitHub • Postman	Environments Linux • Apache • XAMPP	Practices Clean Code • Business rules

PROFESSIONAL EXPERIENCE

Municipality of Anhumas | Administrative Intern - Technology and Process Automation

2026 - Present

- Work as an internal problem solver, identifying repetitive tasks and administrative bottlenecks that can be addressed through programming and automation.
- Developed an automation solution for the Municipality's official publications, reducing manual work related to document review, organization, and publishing.
- Developing CotasMart for the Purchasing Department, expanding and automating price research that was previously performed manually on a daily basis.

FEATURED PROJECTS

CotasMart | Quotation and Price Comparison System

- Laravel system created for the Purchasing Department, automating quotations and expanding price research across multiple sources.
- Uses AI to interpret search queries and external API integrations to return more objective, filtered, and comparable results.

TechnologiesPHP, Laravel, MySQL, JavaScript, REST APIs, Groq, SerpApi

Publishing Automation - Municipality of Anhumas | Document and Process Automation

- Python automation for checking, organizing, and synchronizing official publications such as decrees, laws, and administrative orders.
- Integration with Word/PDF, Playwright, and regular expressions for conversion, validation, standardization, and report generation.

TechnologiesPython, Playwright, Regex, Word/PDF automation, Windows
